Inverse problem on manifolds and control

Introduction

Theorem (Null-controllability of the heat equation (Lebeau & Robbiano 1995, Fursikov & Imanuvilov 1996))

For every $T > 0$ and every initial condition f_0 , there exists $u \in L^2((0, T) \times \omega)$ such that the solution f of
$$(\partial_t - \Delta)f(t, x) = \mathbf{1}_\omega u(t, x), \quad f(0, \cdot) = f_0$$
satisfies $f(T, \cdot) = 0$.

Theorem (Null-controllability of the heat equation (Lebeau & Robbiano 1995, Fursikov & Imanuvilov 1996))

For every $T > 0$ and every initial condition f_0 , there exists $u \in L^2((0, T) \times \omega)$ such that the solution f of

$$(\partial_t - \Delta)f(t, x) = \mathbf{1}_\omega u(t, x), \quad f(0, \cdot) = f_0$$

satisfies $f(T, \cdot) = 0$.

Observability

Equivalent dual problem to null-controllability:

$$(\partial_t - \Delta)g = 0 \implies \|g(T, \cdot)\|_{L^2(\Omega)} \leq C \|g\|_{L^2([0, T] \times \omega)}$$

Definition (Half-heat equation)

If $f(x) = \sum_{n \in \mathbb{Z}} a_n e^{inx}$, $|D_x|f(x) = \sum_{n \in \mathbb{Z}} |n| a_n e^{inx}$.

$$(\partial_t + |D_x|)f = \mathbf{1}_{\omega} u.$$

Question

- Study the control properties of the half-heat equation.
- Characterize the initial states that can be steered to 0.

Definition (Half-heat equation)

If $f(x) = \sum_{n \in \mathbb{Z}} a_n e^{inx}$, $|D_x|f(x) = \sum_{n \in \mathbb{Z}} |n| a_n e^{inx}$.

$$(\partial_t + |D_x|)f = \mathbf{1}_{\omega} u.$$

Question

- Study the control properties of the half-heat equation.
- Characterize the initial states that can be steered to 0.

Control of positive frequencies

Control of all frequencies

Results

Theorem (K, 2015)

Let ω be a strict interval of $\mathbb{T}$. The control system $(\partial_t + |D_x|)f(t, x) = \mathbf{1}_\omega u(t, x)$ is not null-controllable.

Proof.

Solutions of $(\partial_t + |D_x|)g = 0$: $g(t, x) = \sum_n a_n e^{-|n|t} e^{inx}$.

$$\text{Null-controllability} \implies \sum_{n>0} |a_n|^2 e^{-2nT} \leq C \int_{[0,T] \times \omega} \left| \sum_{n>0} a_n e^{-nt} e^{inx} \right|^2 dt dy$$

Theorem (K, 2015)

Let ω be a strict interval of $\mathbb{T}$. The control system $(\partial_t + |D_x|)f(t, x) = \mathbf{1}_\omega u(t, x)$ is not null-controllable.

Proof.

Solutions of $(\partial_t + |D_x|)g = 0$: $g(t, x) = \sum_n a_n e^{-|n|t} e^{inx}$.

$$\text{Null-controllability} \implies \sum_{n>0} |a_n|^2 e^{-2nT} \leq C \int_{[0,T] \times \omega} \left| \sum_{n>0} a_n e^{-nt} e^{inx} \right|^2 dt dy$$

- Change of variables: $z = e^{-t+ix}$
- Null-controllability $\implies$ for every polynomials $p \in \mathbb{C}[X]$, $\|p\|_{L^2(D(0, e^{-T}))} \leq C \|p\|_{L^2(\mathcal{D})}$
- This inequality does not hold.

Definition (Riesz projection)

$$\text{if } f(x) = \sum_{n \in \mathbb{Z}} a_n e^{inx}, \quad P_+ f(x) = \sum_{n \geq 0} a_n e^{inx}.$$

Definition (The H^2 control system)

$$(\partial_t + |D_x|)f(t, x) = \mathbf{1}_{\omega} u(t, x), \quad f(0, \cdot) \in L^2(\mathbb{T}) \quad (E_{L^2})$$

Definition (Riesz projection)

$$\text{if } f(x) = \sum_{n \in \mathbb{Z}} a_n e^{inx}, \quad P_+ f(x) = \sum_{n \geq 0} a_n e^{inx}.$$

Definition (The H^2 control system)

$$(\partial_t + |D_x|)f(t, x) = \mathbf{1}_{\omega} u(t, x), \quad f(0, \cdot) \in L^2(\mathbb{T}) \quad (E_{L^2})$$

$$(\partial_t + |D_x|)f(t, x) = P_+ \mathbf{1}_{\omega} u(t, x), \quad f(0, \cdot) \in H^2(\mathbb{T}) \quad (E_{H^2})$$

Annoyance: $H^2(\mathbb{T}) = P_+(L^2(\mathbb{T}))$ is the Hardy space

Definition

$$\mathcal{NC}_{L^2}(\omega, T) = \{f_0 \in L^2(\mathbb{T}), \exists u \in L^2([0, T] \times \omega), \text{ solution } f \text{ of } (E_{L^2}) \text{ s.t. } f(T, \cdot) = 0\}$$

$$\mathcal{NC}_{H^2}(\omega, T) = \{f_0 \in H^2(\mathbb{T}), \exists u \in L^2([0, T] \times \omega), \text{ solution } f \text{ of } (E_{H^2}) \text{ s.t. } f(T, \cdot) = 0\}$$

Theorem (Hartmann-K 2024)

$\mathcal{NC}_{H^2}(\omega, T)$ and $\mathcal{NC}_{L^2}(\omega, T)$ do not depend on T .

Theorem (Hartmann-K 2024)

If $f_0 \in H^2(\mathbb{T})$ is nonzero and analytic on $\mathbb{T}$, $f_0 \notin \mathcal{NC}_{H^2}(\omega)$.

If $f_0 \in L^2(\mathbb{T})$ is nonzero and analytic on $\mathbb{T}$, $f_0 \notin \mathcal{NC}_{L^2}(\omega)$.

Theorem (Hartmann-K 2024)

$\mathcal{NC}_{H^2}(\omega)$ (resp. $\mathcal{NC}_{L^2}(\omega)$) and its complement are dense in $H^2(\mathbb{T})$ (resp. $L^2(\mathbb{T})$).

Theorem (Hartmann-K 2024)

$\mathcal{NC}_{H^2}(\omega, T)$ and $\mathcal{NC}_{L^2}(\omega, T)$ do not depend on T .

Theorem (Hartmann-K 2024)

If $f_0 \in H^2(\mathbb{T})$ is nonzero and analytic on $\mathbb{T}$, $f_0 \notin \mathcal{NC}_{H^2}(\omega)$.

Control of positive frequencies

Further annoyances

$$\mathbb{R}/2\pi\mathbb{Z} = \mathbb{T} \approx \{z \in \mathbb{C}, |z| = 1\}, \quad H^2(\mathbb{T}) \approx \left\{ \sum_{n \geq 0} a_n z^n, (a_n) \in \ell^2 \right\}, \quad f(x) \approx f(e^{ix})$$

Proposition (observability inequality)

Let $f_0 \in H^2(\mathbb{T})$. $f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $C > 0$ such that

$$\forall p \in \mathbb{C}[X], \quad \int_0^{2\pi} p(e^{it}) \overline{f_0(e^{it})} dt \leq C \|p\|_{L^2(\Omega_T)}.$$

Further annoyances

$$\mathbb{R}/2\pi\mathbb{Z} = \mathbb{T} \approx \{z \in \mathbb{C}, |z| = 1\}, \quad H^2(\mathbb{T}) \approx \left\{ \sum_{n \geq 0} a_n z^n, (a_n) \in \ell^2 \right\}, \quad f(x) \approx f(e^{ix})$$

Proposition (observability inequality)

Let $f_0 \in H^2(\mathbb{T})$. $f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $C > 0$ such that

$$\forall p \in \mathbb{C}[X], \quad \int_0^{2\pi} p(e^{it}) \overline{f_0(e^{it})} dt \leq C \|p\|_{L^2(\Omega_T)}.$$

Proof.

$f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $C > 0$ such that for every $g_0 \in H^2(\mathbb{T})$,

$$\langle f_0, e^{-T|D_x|} g_0 \rangle_{H^2(\mathbb{T})} \leq C \int_0^T \int_{\omega} |e^{-t|D_x|} g_0(e^{ix})|^2 dt dy.$$

Further annoyances

$$\mathbb{R}/2\pi\mathbb{Z} = \mathbb{T} \approx \{z \in \mathbb{C}, |z| = 1\}, \quad H^2(\mathbb{T}) \approx \left\{ \sum_{n \geq 0} a_n z^n, (a_n) \in \ell^2 \right\}, \quad f(x) \approx f(e^{ix})$$

Proposition (observability inequality)

Let $f_0 \in H^2(\mathbb{T})$. $f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $C > 0$ such that

$$\forall p \in \mathbb{C}[X], \quad \int_0^{2\pi} p(e^{it}) \overline{f_0(e^{it})} dt \leq C \|p\|_{L^2(\Omega_T)}.$$

Proof.

$f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $C > 0$ such that for every $g_0 \in H^2(\mathbb{T})$,

$$\langle f_0, g_0(e^{-T \cdot}) \rangle_{H^2(\mathbb{T})} \leq C \int_0^T \int_{\omega} |g_0(e^{-t+ix})|^2 dt dy.$$

$$e^{-t|D_x|} g_0(e^{ix}) = \sum_{n \geq 0} \widehat{g_0}(n) e^{iny-nt} = \sum_{n \geq 0} \widehat{g_0}(n) (e^{iy-t})^n.$$

Change of variables $z = e^{-t+ix}$.

Theorem (Hartmann-K 2024)

If $h \in W_{00}^{1/2,2}(\omega)$, $P_+h \in \mathcal{NC}_{H^2}(\omega)$.

Proof.

- extends h by 0 on $\partial\Omega_T$
- $h \in W^{1/2,2}(\partial\Omega_T)$
- h extends as an $W^{1,2}(\Omega_T)$ function.

Theorem (Hartmann-K 2024)

If $h \in W_{00}^{1/2,2}(\omega)$, $P_+h \in \mathcal{NC}_{H^2}(\omega)$.

Proof.

- extends h by 0 on $\partial\Omega_T$
- $h \in W^{1/2,2}(\partial\Omega_T)$
- h extends as an $W^{1,2}(\Omega_T)$ function.
- Apply stokes formula:

$$\int_{\partial\Omega_T} \bar{h}(z)p(z) \, dz = 2i \int_{\Omega_T} \partial_{\bar{z}}(\bar{h}p)(z) \, dA(z)$$

Theorem (Hartmann-K 2024)

If $h \in W_{00}^{1/2,2}(\omega)$, $P_+h \in \mathcal{NC}_{H^2}(\omega)$.

Proof.

- extends h by 0 on $\partial\Omega_T$
- $h \in W^{1/2,2}(\partial\Omega_T)$
- h extends as an $W^{1,2}(\Omega_T)$ function.
- Apply stokes formula:

$$\int_{\partial\Omega_T} \bar{h}(z)p(z) dz = 2i \int_{\Omega_T} \partial_{\bar{z}}(\bar{h}p)(z) dA(z)$$

- Left-hand side: $\approx \langle h, p \rangle_{H^2} = \langle h, P_+p \rangle_{H^2} = \langle P_+h, p \rangle_{H^2}$.
- Right-hand side: $\int_{\Omega_T} \partial_{\bar{z}}(\bar{h}p)(z) dA(z) = \int_{\Omega_T} p(z) \underbrace{\partial_{\bar{z}}\bar{h}(z)}_{\in L^2(\Omega_T)} dA(z)$

□

Theorem (Hartmann-K 2024)

Let $f_0 \in H^2(\mathbb{T})$. If $f_0 \in \mathcal{NC}_{H^2}(\omega)$, f_0 extends as a holomorphic function to $\mathbb{C} \setminus \text{closure}(\omega)$, and $f_0(z) \xrightarrow{|z| \rightarrow \infty} 0$. Moreover $\int_{|z|>1} |f'_0(z)|^2 dA(z) < +\infty$.

Proof.

- let $k_u(z) = \frac{1}{2\pi(1 - \bar{u}z)}$. If $f_0 \in H^2(\mathbb{T})$, $f_0(u) = \langle f_0, k_u \rangle_{H^2}$.
 - for all $p \in \mathbb{C}[X]$, $\ell(p) := \langle f_0, p \rangle_{H^2} \leq C \|p\|_{L^2(\Omega_T)}$
 - extend ℓ by density to $A^2(\Omega_T)$ (space of holomorphic functions on Ω_T which are $L^2(\Omega_T)$)
- We can define $\ell(k_u)$ if $u \notin \Omega_T^*$.

- $\phi(u) = \begin{cases} f_0(u) & \text{if } |u| < 1 \\ \ell(k_u) & \text{if } u \notin \Omega_T^* \end{cases}$ extends f_0 .
- $\|k_u\|_{L^2(\Omega_T)} = O(1/|u|)$: $f_0(z) \xrightarrow{|z| \rightarrow \infty} 0$
- $\ell(p) = \langle \varphi, p \rangle_{A^2(\Omega_T)}$ $f'_0(u) = \ell(\partial_{\bar{u}} k_u) = \langle k_u^{\text{Bergman}}, \varphi \mathbf{1}_{\Omega_T} \rangle_{A^2(|z|>1)}$

Theorem (Hartmann-K 2024)

If $f_0 \in H^2(\mathbb{T}) \cap W^{1/2,2}(\mathbb{T})$, and $f_0 \in \mathcal{NC}_{H^2}(\omega)$, there exists $h \in W_{00}^{1/2,2}(\omega)$ such that $f_0 = P_+ h$.

Proof.

- Extend f_0 holomorphically to $\mathbb{C} \setminus \text{closure}(\omega)$ as above
- Set

$$h(e^{i\theta}) = \lim_{r \rightarrow 1^-} \left(f_0(re^{i\theta}) - f_0(r^{-1}e^{i\theta}) \right)$$

- Idea: Positive frequencies of h : $f_0|_{|z|<1}$
Negative frequencies of h : $f_0|_{|z|>1}$

Theorem (Hartmann-K 2024)

Let $f_0 \in \mathcal{NC}_{H^2}(\omega)$. There exists $h \in L^2(\mathbb{T})$ such that

- $f_0 = P_+ h$
- $\text{Supp}(h) \subset \text{closure}(\omega)$
- $\sum_{n \leq 0} |n| |\hat{h}(n)|^2 < +\infty$

Theorem (Hartmann-K 2024)

Let $h \in L^2(\mathbb{T})$ such that

- $\text{Supp}(h) \subset \text{closure}(\omega)$
- $\sum_{n \leq 0} |n| |\hat{h}(n)|^2 < +\infty$
- $\int_{\omega} \frac{1}{d(z, \partial\omega)} |h(z)|^2 |dz| < +\infty.$

Then $P_+ h \in \mathcal{NC}_{H^2}(\omega)$.

Theorem (Hartmann-K 2024)

Let $f_0 \in \mathcal{NC}_{H^2}(\omega)$. There exists $h \in L^2(\mathbb{T})$ such that

- $f_0 = P_+ h$
- $\text{Supp}(h) \subset \text{closure}(\omega)$
- $\sum_{n \leq 0} |n| |\hat{h}(n)|^2 < +\infty$

Theorem (Hartmann-K 2024)

Let $h \in L^2(\mathbb{T})$ such that

- $\text{Supp}(h) \subset \text{closure}(\omega)$
- $\sum_{n \leq 0} |n| |\hat{h}(n)|^2 < +\infty$
- $\int_{\omega} \frac{1}{d(z, \partial\omega)} |h(z)|^2 |dz| < +\infty$.

Then $P_+ h \in \mathcal{NC}_{H^2}(\omega)$.

Theorem (Hartmann-K 2024)

Let $f_0 \in L^2(\mathbb{T})$. $f_0 \in \mathcal{NC}_{H^2}(\omega)$ if and only if there exists $h \in L^2(\mathbb{T})$ such that

- $f_0 = P_+ h$
- $\text{Supp}(h) \subset \text{closure}(\omega)$
- The solution u of
$$\begin{cases} \Delta u(x) = 0, & x \in \Omega_T \\ u(x) = h(x), & x \in \omega \\ u(x) = 0, & x \in \partial\Omega_T \setminus \omega \end{cases}$$
 satisfies $\partial_z u \in L^2(\Omega_T)$

Control of all frequencies

- We know when the projection on positive frequencies is null-controllable
- If $f_0 \in \mathcal{NC}_{L^2}(\omega, T)$, $P_+ f_0 \in \mathcal{NC}_{H^2}(\omega, T)$
- Negative frequencies: just consider $\overline{f_0}$

- We know when the projection on positive frequencies is null-controllable
